Landtype Association (LTA) information depicts subregional and landscape ecological units developed according to the classification scheme of the National Hierarchical Framework of Ecological Units (NHFEU) (Avers et al., 1994). The NHFEU is an ecological classification system that divides landscapes into ecologically significant regions, at multiple scales, on the associations of biotic and environmental factors, including climate, physiography, water, soils, air, hydrology, and potential natural communities. The Landtype Associations were developed, mapped, and described in participation with a variety of agencies, organizations, and individuals. This data is reviewed annually.

FEUNW92D is a 1:250,000 data source produced by the WILTA Project Team.

The data shown on this map are available on a cost of resources basis from WDNR, GeoServices Section. See the "GIS Datasourcing" section, visit <http://www.dnr.state.wi.us/org/at/et/geo/>. This data layer is included in DVGISLib, a part of the DNRView extension to ArcView. DNRView makes it easier to use and share DNR geographic data. Trained ArcView users can obtain DNRView from the appropriate regional contact listed in the "GIS Datasourcing" section.
